Special Issue

Natural Language Processing for Biomedical Applications

Table of Contents

The future of natural language processing for biomedical applications
R. Baud, P. Ruch (Switzerland) 1
Getting to the (c)ore of knowledge: mining biomedical literature
B. de Bruijn, J. Martin (Canada) 7
Learning anchor verbs for biological interaction patterns from published text articles
V. Hatzivassiloglou, W. Weng (USA). 19
Terminology-driven literature mining and knowledge acquisition in biomedicine
G. Nenadić, H. Mima, I. Spasić, S. Ananiadou, J.-i. Tsujii (UK, Japan) 33
Protein names and how to find them
K. Franzén, G. Eriksson, F. Olsson, L. Asker, P. Lidén, J. Cöster (Sweden). 49
MEDSYNDIKATE—a natural language system for the extraction of medical information from findings reports
U. Hahn, M. Romacker, S. Schulz (Germany) 63
Evaluating and reducing the effect of data corruption when applying bag of words approaches to medical records
P. Ruch, R. Baud, A. Geissbühler (Switzerland) 75
Assessing the consistency of a biomedical terminology through lexical knowledge
O. Bodenreider, A. Burgun, T.C. Rindflesch (USA, France) 85
Semantic annotation for concept-based cross-language medical information retrieval
M. Volk, B. Ripplinger, Š. Vintar, P. Buitelaar, D. Raileanu, B. Sacaleanu (Switzerland, Germany) 97
Restoring accents in unknown biomedical words: application to the French MeSH thesaurus
P. Zweigenbaum, N. Grabar (France) 113
